

Calculer :

- $10 \times (30 - 12) =$

- $13 - \frac{10}{2} \times 4 =$

- $\frac{5}{4} \div \frac{15 - 2 \times 35}{60} =$

- si  $x = 4$ ,  
 $(x - 1)(2x + 3) =$

Calculer :

$$\begin{aligned} \blacksquare \quad 10 \times (30 - 12) &= \\ 10 \times 18 &= 180 \end{aligned}$$

$$\begin{aligned} \blacksquare \quad \frac{5}{4} \div \frac{15 - 2 \times 35}{60} &= \\ \frac{5}{4} \times \frac{60}{-55} &= -\frac{300}{220} = -\frac{15}{11} \end{aligned}$$

$$\begin{aligned} \blacksquare \quad 13 - \frac{10}{2} \times 4 &= \\ 13 - 20 &= -7 \end{aligned}$$

$$\begin{aligned} \blacksquare \quad \text{si } x = 4, \\ (x - 1)(2x + 3) &= \\ (4 - 1)(2 \times 4 + 3) &= \\ 3 \times 11 &= 33 \end{aligned}$$
